SUNSMART ISP

Lightweight. Portable. Powerful. Multi-Function. All-in-one System.

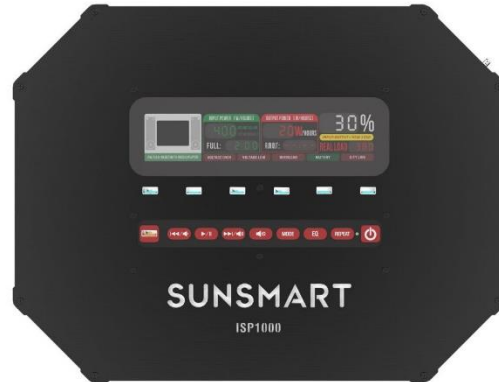

What is SUNSMART ISP?

SUNSMART ISP is an *Integrated Solar Power* which comes in a “compact size box design” that provides free use of electricity by a technology called the Solar Photovoltaic System.

TOP & SIDEVIEW

FRONT VIEW

BACK VIEW

SUNSMART ISP is Light Weight, Portable, Powerful, Multi-functions, All-In-One system. It provides “**Uninterrupted Power Supply**” of SOLAR electricity in a more convenient, most practical and safest way.

What is SUNSMART ISP?

SUNSMART ISP is capable to supply adequate electricity output everyday for all standard household appliances from your Lights, TV, DVD player, Electric Fans, Computer, Lamps, Air Conditioners, Microwave, Water-pumps, Refrigerator & etc. *(Depends on which product model)*

How does SUNSMART ISP work?

SUNSMART ISP works in very easy, practical & safest ways

No. 1 , By plugging in an extension cord directly to SUNSMART ISP device. *By doing so, you can plug in as many electrical appliances as you wish based on the wattage of the device up to the maximum output of the inverter.*

How does SUNSMART ISP work?

No. 2 , By connecting the SUNSMART ISP device directly to the main breaker of the house. It can be connected directly to the circuit breaker to provide free electricity; the system will switch automatically to powerline supply when ISP battery power is used up, and automatically flip back to ISP power supply again once fully solar charged on the next day, so on so off. This is the best convenient way because your SUNSMART device will automatically connect and power on/off using solar power or electric line without a glitch. This means also that there's no more brownouts. You now have a free convenient choice to power your house using SUNSMART device "all day and night with free and clean electricity!"
